

Sinopro is a registered Chinese-owned company that is a central actor in sourcing natural Balsa wood, a unique tree species native to Ecuador, South America. Balsa wood has a long history as a proven and favored core material in the composite manufacturing of wind turbine blades. Through Sinopro's business, we are demonstrating our dedication to our Chinese government's initiative to lowering China's carbon footprint by supporting our country with the supply of this key material for wind turbines.

All nations are making pledges to improving their relationship with the natural environment and to mitigating climate change. Through the commitment to wind energy, China's leaders are reinforcing our country's global leadership towards environmental stewardship for current and future generations. Sinopro is taking this commitment a step further by ensuring that the material used in the manufacturing of wind turbines is renewable, low carbon Balsa wood and not carbon-intensive artificial materials.

New technology in the core materials in the composite industry is advancing daily. China must stay competitive in the advancement of composites. At the same time, we must recognize the global trend towards the use of natural materials in the pursuit of lowering the carbon footprint in every aspect of life. Let us show the world not only China's leadership in renewable energy but also our support for the use of natural, low-carbon materials.

Sinopro leads a group of pioneering Balsa wood forestry companies in Ecuador to ensure China has an excellent source of this proven nature and sustainable core material for all the new advancements in the composite industry. This group is committed to improving the industry and to supplying the world with this sustainable composite material for years to come.

With this group, Sinopro is investing in plantations to ensure our future supply. Our five-year plan is to plant 5,000 hectares dedicated solely to supplying our Chinese wind and composite industries. This investment will show the world China's determination to continue leading in environmental sustainability, in particular in the trend toward the use of renewable, low-carbon materials.

Sinopro is one of just a few companies structured to operate in both China and Ecuador. Sinopro, in partnership with our Ecuadorian group, is determined to support China so that our country continues to lead in international supply chains and global environmental stewardship.

China must be ready with every market strategy to compete in this ever-changing world. Through the devoted efforts and long-term planning of our great country, China will be able to continue using the only truly natural and proven core composite material for our future generations' supply of wind energy.

Sinopro is a dedicated pioneer in the Balsa wood industry. We are looking for partners with the vision to join and support the future use of this amazing natural, climate-friendly material!
