

President Xi Jinping has recognized climate change as one of his administration's top concerns, and Beijing has made a variety of pledges to address it. These include:

- Achieving carbon neutrality by 2060;
- Reaching peak carbon dioxide emissions before 2030;
- Having renewable energy sources account for 25 percent of total energy consumption by 2030;
- Reducing carbon intensity, or the amount of carbon emitted per unit of GDP, by more than 65 percent by 2030;
- Installing enough solar and wind power generators to have a combined capacity of 1.2 billion Kilowatts by 2030;
- Boosting forest coverage by around six billion cubic meters by 2030; and,
- Banning sales of new gas-powered vehicles by 2035.

Wind power remained China's third-largest source of electricity at the end of 2020, accounting for 12.8% of total power generation capacity. In 2020, China added 71.6 GW of wind power generation capacity to reach a total capacity of 281GW. Sinopro is now totally dedicated in supporting President Xi Jinping with future projects and investment to ensure China continues to lead the world in our Green Energy target of 2030.

As part of its efforts in clean energy, China has invested heavily in alternative energy sources and technology. In 2010, China became the world's largest wind energy producer...

...Sinopro has become the 1# Chinese company investing in natural core materials in Ecuador.

...and since that time China has left the global competition in the dust.

Sinopro will continue to assist the Chinese government with wind power generation, while the U.S.A. is losing ground in the clean energy race. The stakes are high in this race: the market for "low-carbon efficiency projects and products" will triple to \$2.2 trillion by the end of the decade. Sinopro is confident with the leadership of our President Xi Jinping encouraging other pioneers of industry to believe in the future of China's people and ability to stay competitive in the world's changing marketplace. We need those industrialist to come forward ready to take on the great challenge of keeping China Strong and Clean for our future generations. Sinopro now has a solid infrastructure in Ecuador with the development of secure future plantations to continue the supply of Balsa wood to Chinese Composite Manufacturers to ensure China leads the world with their environmental programs.
